

Performance Testing

LegalEase – AI Legal Document Generator
LegalEase Inc. | Documentation Version 2.0

Dhanasri S. (Team Leader), Saranya E., Reshma R., Sandhiya S.

Test approach

The team tested the local application by running the FastAPI backend and the Streamlit frontend, then submitting sample inputs and checking every download format.

Observed checks

- Backend and frontend start successfully
- Form renders and accepts input
- POST /generate reaches the backend and passes validation
- AI-generated document is returned when the service is available
- Preview and inline editing work
- TXT, DOCX and PDF downloads work
- Errors return HTTP 500 without exposing the API key

Manual API test

curl -X POST http://127.0.0.1:8000/generate with document_type, parties, terms and dates in JSON.

Environment

Local Windows development environment. Response time depends on the availability and rate limits of the Gemini API.
